

HACKATHON

The Appointment Booking System is a comprehensive online platform designed to streamline the process of scheduling appointments.

The system provides users with a user-friendly interface that allows for easy signup and login. Once logged in, users are directed to the home page where they can access the navigation bar that provides easy access to various features such as appointment booking, name, updated appointments, and feedback. The appointment booking feature allows users to enter their appointment details, including the service they require and the preferred time for the appointment. The updated appointments feature allows users to view all their appointment details, including the services they have booked and the time of the appointments. Additionally, the feedback feature allows users to provide valuable feedback on the services they have received. Overall, the Appointment Booking System is a valuable tool that simplifies the appointment booking process and enhances the user experience.

The Appointment Booking System also offers an intuitive and efficient admin login feature that enables administrators to manage appointments and feedback. Upon login, administrators are directed to the home page, where they can view the analytics part which will be in the form of a graph and that includes the number of appointments for each service. This feature provides administrators with a clear overview of all the appointments and helps them manage the schedule effectively. The system also enables administrators to access the feedback feature, which allows them to view all the feedback submitted by users. This feedback can be used to improve the quality of the services and enhance the user experience. Overall, the admin login feature of the Appointment Booking System is a valuable tool that simplifies the management of appointments and feedback, enabling administrators to provide a high-quality service to their users.
